

# 350 MACK HORSES

## THE ENERGY EFFICIENT SUPER-SAVER ENGINE

Mack E6-350 6 cylinder in-line diesel is the ultimate development of the Mack "672" engine family. It's the lightest water cooled 350 (bhp) engine in the business, developing 1538 Nm (1131 lbs/ft) torque @ 1400 rpm. Exclusive Series Charge Air Cooling, air-to-water air-to-air, significantly increases fuel efficiency and performance. Dual system charge air cooling means cooler, more dense air charges being drawn into combustion chambers. More cooler air gives cleaner combustion. Combined with the turbocharger, fuel flow and power are increased, while fuel economy and low exhaust emissions are retained. Mack E6-350 can be fitted to conventional R600 series and COE models.

### EXTENDED SERVICE INTERVAL

Mack's proven E.S.I. "Plus" triple spin-on engine oil filters extend oil change intervals and reduce service time.

### POWER-MATCHED TRANSMISSION

Team your Mack E6-350 governed to 1950 rpm with either 10 or 12 speed transmissions to give maximum efficiency for your needs.

### BIG POWER TRAIN WARRANTY

All Mack diesel engines and transmissions now receive a basic full warranty on parts and labour coverage for 24 months or 161,000 kilometres, whichever comes first. Plus there's an extended component

coverage to 36 months or 483,000 kilometres — for cylinder blocks, crankshafts, cylinder heads, connecting rods, camshafts, timing gears and transmission cases. That's really putting confidence in writing.
